

# Institutional Interventions for Enhancing Innovation Amongst Students : The Experiential Moderator

Navjeet Kaur<sup>1</sup>  
Pallvi Arora<sup>2</sup>

## Abstract

The twenty - first century is a century of cut throat competition, globalization, cutting-edge technology, and advancement adopted for continuous betterment and improvement. Such environments of uncertainty and fluctuations ignite a need for continuous innovation across nations to achieve success in every sphere. Universities as well as higher education institutions (HEIs) of a nation are the major agents that facilitate in inculcating innovation as a habit among youth as their several initiatives play a key role for strengthening the ecosystem of innovation in the campuses that further substantiates the culture of innovation nation-wide. Considering the same, the objective of this research paper was to determine the role of HEIs to stimulate innovation amongst students and determine the world - class practices adopted by global HEIs. The study also incorporated the adoption of Kolb's Experiential Learning approach to ignite innovation amongst students at the grass root level in a supportive innovative ecosystem.

The twenty - first century is a century of cut throat competition, globalization, cutting edge technology, and advancement adopted for continuous betterment and improvement. Such environments of uncertainty and fluctuations ignite the need for continuous innovation across nations to achieve success in every sphere. Universities as well as higher education institutions (HEIs) of a nation are the major agents in inculcating innovation as a habit among youth as their several interventions or initiatives play a key role for strengthening the ecosystem of innovation in the campuses that further substantiates a culture of innovation nation-wide. It has been observed worldwide that an improved quality of practices/interventions adopted by higher education institutions and universities for equipping innovation as a habit among students is the consequence of teaching and innovation as both are complementary as well as supplementary to each other and foster an innovation culture (Choudhury, 2016).

The Union Minister of India, Shri Prakash Javadekar considers that the twenty - first century is the “century of innovation” and the Prime Minister of India, Shri Narendra Modi stated that the decade 2010 – 2020 is the

“Decade of Innovation” (Press Information Bureau [PIB], 2018). As higher education institutions are the critical assets of a nation and play a significant role towards enhancing the innovation potential amongst students and for developing the culture of innovation in a nation, it becomes imperative to determine the incumbent role that HEIs play herein.

It has been explored that the Indian higher education system is one of the strongest and largest in the entire world. India has the world's second largest population after China, largest young population in the age bracket of 5 – 24 years, and after the US, India is the second largest market for e-learning that creates a massive potential for boosting the higher education network in the nation (India Brand Equity Foundation [IBEF], 2020).

In the recent past, the Indian government has made huge investments, followed appreciable measures, and has taken remarkable initiatives to encourage and raise the standard of higher education in collaboration with universities and institutions with a view to unleash creativity and innovation potential among students by developing a culture of innovation in the nation and creating a facilitating environment for the same.

The present piece of research draws attention towards the institutional role and interventions to inspire students for innovation and developing a culture of innovation in the nation. India moved upward from 86<sup>th</sup> rank to 57<sup>th</sup> rank in 2017–18 on the Global Innovation Ranking (PIB, 2018). Thus, India becomes a strong case for study aligned to the remarkable innovation improvement that has drawn our attention for the same. The paper addresses incorporation of the experiential learning approach of innovation to stimulate the drive of students to innovate at an individual level in facilitating an innovation ecosystem, that is, HEI's innovation interventions.

## Objectives

- (1) To determine the role of higher education institutions (HEIs) to flourish innovation amongst students.
- (2) To present a conceptual view of the world class practices/interventions adopted by global HEIs.
- (3) To understand the role of experiential learning in shaping the innovation potential of the students.

## Literature Review

Innovation is the implementation of new/unique/novel ideas/inventions/discoveries for some purpose, and the innovation culture is the culture that supports and favours the implementation of new/latest ideas (Roffeei, Kamarulzaman, & Yusop, 2016). It has been considered that innovation is the process of introducing new elements into a culture through either new discovery or imitation of existing discovery (Schaefer, 2012). Innovation refers to the invention and implementation of management practices, processes, structures, or techniques that are new to the state of the art and are intended to further organizational goals (Birkinshaw, Hamel, & Mol, 2008). Globalization, demographic changes, science and technology, sustainable development, changes in knowledge and competence, changes in work and people's mental resources, changes in the cultural environment, governance, safety, and security are the major antecedents for encouraging innovation among students constituting innovative research, pedagogies, and organizational structure (Tierney & Lanford, 2016 ; Varis, 2007).

It has been observed that the role and initiatives of HEIs are very significant and valuable as well in order to build creative and knowledgeable students (Ahmad, 2020). Moreover, interventions of higher educational institutions and universities play a pivotal role to boost innovation among students through the creation of a conducive internal and external culture of innovation (Alpaydin, Owusu, & Moghadam-Saman, 2018 ; Bhatnagar, 2020 ; Caniels & Bosch, 2011 ; Gronning, 2008 ; Hasanefendic, Birkholz, Horta, & Van der Sijda, 2017 ; Lundvall, 2007 ; Mykhailyshyn, Kondur, & Serman, 2018 ; Piterou & Birch, 2014 ; Vidican, 2009). In fact,

higher educational institutions basically serve as a contextual field that necessitates the need for encouraging the innovativeness among the youth of a nation (Tierney & Lanford, 2016). The enhancement of innovation is an outcome of an interaction between the ingredients of knowledge triangle comprising of education, research, and technology. Significantly, HEIs serve as the key foundation for enhancing innovation among students by unleashing their creativity and curiosity through the inculcation of innovation habits and raising the level of R&D and technology (Bhatnagar, 2020 ; Heitor, 2015 ; Lassnigg, Hartl, Unger, & Schwarzenbacher, 2017).

Despite the fact that the Indian higher education network stands amongst one of the world's largest education systems and holds a strong place in the global education system (IBEF, 2020), still the ecosystem of innovation in India is very weak and not yet fully established (Sreenivasulu, 2013). However, educational institutions have taken remarkable initiatives by introducing IICs, ARIIA, SIHs, AIM, NIC, NSSP, Unnat Bharat Abhiyan, etc. to fill the gap (British Council, 2014 ; IBEF, 2020 ; Nair, 2018 ; Sengupta & Parekh, 2009 ; Sheikh, 2017 ; Sreenivasulu, 2013 ; Thomson, 2008) and raise the innovation potential of students.

## **Research Gap**

Interventions of higher educational institutions are considered as the major actors in equipping a habit of innovation among students (Heitor, 2015 ; Lassnigg et al., 2017 ; Tierney & Lanford, 2016) and it has been identified that this field of research is unique and under-researched as well as it has gained attention and importance from researchers and scholars in recent past. Majority of the research work conducted in this domain has emphasized upon exploring the role of HEIs in raising innovation standards among students (Caniëls & Bosch, 2011 ; Gronning, 2008 ; Lundvall, 2007 ; Vidican, 2009), where numerous world class interventions/practices employed by global HEIs to instill innovation among students has not been much explored yet. Recently, India's ranking has increased on the Global Innovation Ranking (PIB, 2018) as the level of innovation in India has improved due to the joint efforts of the Government and HEIs (Ahmad, 2020 ; Khatri & Raina, 2019). Therefore, it drew our attention to investigate about the status of innovation in India.

As experiential learning normally finds a place in establishing habits, investigation about incorporation of Kolb's Experiential Learning Approach (1984) to foster the spirit of innovation among students at the individual level in supporting and facilitating an innovation ecosystem could serve as an essential moderator to assist in developing innovation drive/force/inner urge among students at the basic/grass root level (Fink, 2003 ; Kolb & Fry, 1975 ; Kolb & Kolb, 2009 ; Litterio, 2014 ; McLeod, 2010 ; Wurdinger & Carlson, 2010).

## **Methodology**

This research paper is based on available secondary data in the domain and includes the review of research papers including reports of British Council (2014), PIB (2018), and many others that have facilitated in determining the role of HEIs in instilling innovation amongst students. The research work adopts the conceptual framework of Kolb's Experiential Learning model (1984) to ignite innovation amongst students at the grass root level. The present research endeavor includes the time period of 10 years (recent decade) from years 2011 – 2020.

## **Institutional Interventions for Enhancing Innovation Among Students**

Institutions act as active agents through their interventions and initiatives to raise the level of innovation among youth and creating a supportive ecosystem for innovation as well. Table 1 summarizes the numerous institutional interventions that encourage innovation among youth.

## Institutional Interventions for Enhancing Innovation Among Students : A Review of Indian Vis-à-Vis Global Institutions

Table 2 brings out the several institutional interventions adopted by the global HEIs to stimulate the innovation potential of students.

Whilst Table 2 reflects the several institutional interventions taken up by the global HEIs, the following paragraphs reflect the initiatives taken up by the Indian HEIs.

The Indian higher education system is a vast network of 39,050 colleges and 903 universities having enrollment of 37.4 million students in several courses in 2018–19 (IBEF, 2020). In the past few years, Indian institutions have played a significant role and acted as highly active agents to inculcate innovation habits to develop an innovation culture in the nation and to boost and strengthen the innovation ecosystem in collaboration with the Indian government. As per the reports presented by Ghosh (2017), PIB (2018), and IBEF (2020), the following are the major interventions introduced to enhance the innovation among Indian students and to meet the global standards :

- ✍ Network of Innovation Clubs (NICs),
- ✍ Institution's Innovation Councils (IICs),
- ✍ Atal Ranking of Institutions on Innovation Achievements (ARIIA),
- ✍ Smart India Hackathon (SIH),
- ✍ Atal Innovation Mission (AIM),
- ✍ National Student Startup Policy (NSSP), and
- ✍ Unnat Bharat Abhiyan.

All these above mentioned interventions are the combined efforts of HEIs and MHRD, Government of India for promoting innovation among the youth of India. Several individual initiatives are also taken such as introducing innovation projects in colleges, forming clusters of innovation centers, establishing collaborations between institutions and industry, organizing inter-institute research based competitions and events, doing research projects for public and private sector enterprises, creating clustering of colleges, promoting research and practical based education, establishing and promoting accreditation and assessment systems for innovations, solving contemporary issues of the industry and society, forming a research and innovation conducive climate, special focus on research by establishing research institutes, facilitating funding for innovation to encourage potential students, encouraging innovation for solving local challenges and issues, providing incentives for collaborating to foster innovation, and facilitating social innovations in backward areas.

## **Looking for An Experiential Learning Solution at the Grassroot Level : Discussion and Implications**

Across the globe, HEIs are adopting latest and novel practices/interventions to nurture students with the spirit of innovation to survive in the twenty - first century's tremendously competitive environment. Considering the significant role that India is playing as the world's biggest educational hub and its prominent position in the global education industry, numerous interventions to foster innovation levels have been brought to light. With a view to develop a strong innovation ecosystem in India and considering the type of innovation interventions adopted by the world class institutions, an experiential learning approach to innovation is proposed through this paper. Even despite most global and Indian initiatives adopted towards innovation involve an eminent role to be played by the educational institutions, the drive to innovate remains with the student. What is significant here is how this drive may be identified, tapped, and put to action.

Kolb's Experiential Learning model (1984) involving four steps including a) concrete experience, b) reflective observation, c) abstract conceptualization, and d) active experimentation provide a basis for incorporating and developing the innovation drive in the students at the grass root level. According to this model, a learner can enter at any stage of the cycle and then follow the other stages in a sequential fashion (Kolb & Fry, 1975). The model works in a cyclic motion where the first stage of the model is concrete experience (feeling) in which completely new/novel experiences are confronted or unexplored gaps associated with already explored situations are

determined. In the second stage, reflective observation (watching), observations are reflected towards that experience or situation. The third stage is abstract conceptualization (thinking), where new ideas are developed or alterations are generated for existing ideas. In the last stage called active experimentation (doing), the abstracted conceptualization is implemented to the surrounding world for further new experiences.

Also, experiential learning is considered as a paradigm of significant learning (Fink, 2003) that helps students in learning by doing as learning with the help of discussions, participation, work group, and applying classroom information outside the classroom make students more competitive and future ready (Wurdinger & Carlson 2010). It has been summarized that the innovation drive can be escalated among students where they become curious and feel the need to explore new facts by having a concrete experience, accumulate and take note of these facts while trying to make observations about these new facts by reflective observations, which lay down the basis for analysis and conclusion through critical thinking as abstract conceptualizations. Then the approach to abstract conceptualization is adopted for doing tests on the world around in future to gain new experiences by active experimentation (Litterio, 2014; McLeod, 2010).

It is suggested that a combination of the self-initiated drive to innovate along with institutional interventions

**Table 3. Applicability of Experiential Learning Model (ELM) in Higher Education Institutions and Universities Across the Globe for Inculcating Innovation Skills Amongst Students**

can generate better innovative outcomes. Such a combination can bring strong implications for the overall development of a strongly held mindset to innovation as the desire to innovate is now self-driven and institutional interventions serve as a facilitator towards the same. Thus, experiential learning serves as a moderator for the same. Table 3 and Table 4 demonstrate the adaptability of experiential learning model by higher education

institutions and schools across the globe and particularly in India, respectively for inculcating innovation skills amongst students.

Experiential learning has become an essential part of the present day's education system as modern technological advanced education system has taken up the place of the traditional education system (Nath, Behura, Kumar, Kanak, & Sundararajan, 2019). It can be taken place inside as well as outside the classroom and is more advantageous in comparison of traditional learning. Table 5 displays the numerous activities through which experiential learning can take place, which further help in escalating the innovation skills amongst students and make them future ready.

The experiential learning activities discussed in Table 5 along with many others help in bridging the gap between industry and academia.

## Conclusion

Today is the era of extreme transformations, constant upgradation of technology, and advancement in every aspect of human life. Rather than following patterns of traditional education system of textbooks and blackboards,

universities and higher education institutions at the international as well as national levels have started acknowledging the significance of 'learning by doing' and 'hands-on-experience' that help in broadening the knowledge span of students, commitment, engagement, and enhancing their confidence level as well. Using Kolb's Experiential Learning Model as a moderator, universities and HEIs play an eminent role in shaping innovativeness amongst students.

By considering the importance of the phenomenon of 'learning by doing' now, universities and HEIs have initiated the applicability of Kolb's Experiential Learning Model in designing their curricular, co-curricular, and extra-curricular activities along with encouraging participative and experiential learning activities to instill innovation as a habit amongst students and strengthening the innovation ecosystem across the globe. Through the use of practices of modern educational system of practical and experience based learning, universities and HEIs have become active agents of driving the students' personal and professional development, bridging the huge gap between academics and industry while ensuring simultaneous inside and outside classroom success worldwide. With a view to impart quality and excellent innovation education amongst students for making them future ready, the Indian universities and HEIs have to best adapt to experiential learning methodology. This shall not only enable in uplifting their present status, but also act as a driver for matching the extraordinary pace of educational growth of world class universities and HEIs.

## **Theoretical Implications**

This research endeavor majorly revolves around the examination of the phenomenon of interest, including the role of HEIs in enhancing innovation amongst students, world-class interventions/practices used by global HEIs, present status of innovation interventions adopted by Indian HEIs, and incorporation of experiential learning solutions to boost innovation drive among students at the basic level. All these areas under study are recent to explore and have become the center of attraction for researchers and scholars in the recent past. Thus, investigating about these above - mentioned realms will provide conceptual information for the same and make valuable contributions to the concerned literature as well which further help in accommodating future research studies.

## **Policy Implications**

In the current time, to make students more innovative and future ready, it has become an urgency for higher education institutions of a nation to include 'learning by doing' practices as a core of their curriculum formation strategy. HEIs must focus on both inside the class (role playing, games, case studies, simulations, presentations, etc.) and outside the class (internships, practicum, service learning, and cooperative education, etc.) learning activities. Kolb's Experiential Learning Approach is suitable for serving this purpose as this model emphasizes upon practical implementation of the conceptual knowledge gained through critical thinking. Ensuring that the future workforce gains the appropriate skills, such grass-root level initiatives are significant and must be made a part of the policy framework so that critical thinking, innovation, creativity, rationality, etc. become the core of a student's personality. Even the designing of the curriculum at all levels must have a deepened focus on such skills so that they are imbibed in the students from their initial learning stages.

## **Limitations of the Study and Scope for Future Research**

The present research work provides a conceptual view of the world class practices/interventions adopted by global HEIs. It has provided only theoretical information to determine the role of HEIs to flourish innovation

amongst students and to understand the role of experiential learning in shaping the innovation potential of the students as well. To meet the objectives of the study, only secondary data available in the domain were taken into consideration.

Thus, there lies immense future research scope for conducting further studies purely based on quantitative data and a combination of qualitative and quantitative methods. As this piece of research work represents a comparison of institutional interventions of Indian HEIs against institutional interventions adopted by world class HEIs to instill innovation amongst students, it can be replicated for making comparisons of different nations across the globe and also to know the status of institutional interventions of HEIs in different nations and ensure greater learning amongst the participants.

## Authors' Contribution

Dr. Pallvi Arora conceived the idea of this research. Navjeet Kaur gathered the secondary data and worked on the compilation part of the research. The writing of the manuscript was done jointly by both the authors.

## Conflict of Interest

The authors certify that they have no affiliations with or involvement in any organization or entity with any financial interest, or non-financial interest in the subject matter, or materials discussed in this manuscript.

## Funding Acknowledgment

The authors received no financial support for the research, authorship, and/or for the publication of this article.
